## AUTO-ID CREATES TRANSPARENCY AND EFFICIENCY

Automatic identification, or Auto-ID for short, refers to all types of objects and products using e.g. barcodes, RFID tags and data acquisition or transmission using mobile scanners and industrial tablets.

This technology is an essential prerequisite for highly intelligent logistics as well as the entire industry 4.0. A perfectly structured and optimally networked interaction of barcodes, intelligent labels, RFID technologies, data acquisition, identification and transmission devices as well as high-performance software is important for this.

We have been delivering transparent and efficient Auto-ID concepts for intelligent processes in your company since 1992. We always have your logistical goals in mind. Starting with the needs analysis, through the development of a needs-based overall solution, to the sale of software and hardware from well-known manufacturers.

We are your partner for Auto-ID solutions.
